Service Issue - Websites - VISIT

Löst

Oct 28, 2026 3:12 PM CET

Incident reference: WebX shared storage outage
Date: 28 October 2026 | Status: Resolved

What happened
On 27 October 2026, sites on the WebX platform became unreachable for visitors. The cause was a fault in the shared storage service that the platform depends on. Our platform reads its core site configuration from that service, so when the service stopped responding, sites could no longer serve pages and requests timed out.

When did this occur
Started: 27 October 2026, 15:30 CET
Resolved: 27 October 2026, 17:55 CET
Duration: approximately 2 hours 25 minutes

Who was affected
This issue affected customers with sites on the WebX platform, and visitors to those sites were unable to reach the pages during the incident window. We are not aware of any data loss.

What we did
Our team identified the problem within 10 minutes of the first impact and escalated it to the storage provider's technical team. Their engineers restored the storage service at 17:55 CET, and all sites recovered.

Current status
Service has been restored and all sites are operating normally.

Root cause
The shared storage service that our platform depends on stopped responding. Because every WebX site reads its core configuration from that service, the fault affected the whole platform at once rather than a single site. The fault was in the storage layer itself, and the provider's technical team resolved it. We are awaiting the provider's own root cause analysis to confirm that the fix is permanent.

What we are doing to prevent recurrence
We have defined three areas of work to reduce the risk of this happening again and to shorten recovery if it does:
Detect earlier. We are improving monitoring of storage health and capacity, so we are warned before sites are affected rather than learning about a problem from timeouts.
Contain failures. We are improving how the platform behaves when storage is unavailable, so that a single storage fault cannot take every site offline and visitors see a clear message instead of a timeout.
Close the loop with the provider. We are obtaining the storage provider's root cause analysis and their plan to prevent a repeat, to confirm the underlying fix is permanent.

Our apology
We understand that any disruption to your service has a direct impact on your business and your guests. We are sorry for the inconvenience this caused and take our responsibility to deliver a reliable platform very seriously.
If you have any questions or concerns, please contact your account manager or our support team.

Dear Customer,

The technical difficulties affecting websites have been resolved. We are currently monitoring the system to ensure all services remain fully operational.

We apologize for the inconvenience this may have caused you.

Sincerely,
VISIT

Oct 27, 2026 5:00 PM CET

We are still investigating the service disruption affecting multiple websites. Our engineering team is working to restore normal service as quickly as possible.

We apologize for the inconvenience and will share another update as soon as we have more information.

Sincerely,
VISIT

Dear Customer,

We are currently experiencing a major service disruption affecting multiple websites.

The issue occurred during planned security improvements to our infrastructure. Our engineering team is actively investigating and working to restore normal service as quickly as possible.

We sincerely apologize for the inconvenience and will provide further updates as more information becomes available.

Sincerely,
VISIT
