THREAT LANDSCAPE

Attacks in Norway

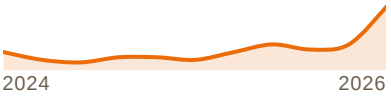

Overview of publicly known cyberattacks against Norwegian organisations, based on open sources.

Registered incidents
79

2026: 50 incidents

Last full quarter (2026 Q3)
23 +188%

vs previous quarter

Most affected sector
Public sector

19 of 79 cases

Most common type
Data breach

Share of all cases **29%**

Each entry is grounded in open sources: NSM bulletins, established media coverage, and the affected organisations' own disclosures. FM CyberSecurity does not publish confidential information from client engagements.

Attacks where AI ran the intrusion itself are collected in the AI hacking register.

DATE	TARGET	SECTOR	TYPE
